The screenshot shows the ReqBin website interface. The top navigation bar includes links for Curl, Python, JavaScript, PHP, Java, JSON, and XML. The main heading is "Online REST & SOAP API Testing Tool". Below this, a description states: "ReqBin is an online API testing tool for REST and SOAP APIs. Test API endpoints by making API requests directly from your browser. Test API responses with built-in JSON and XML validators. Load test your API with hundreds of simulated concurrent connections. Generate code snippets for API automation testing frameworks. Share and discuss your API requests online."

The interface features a sidebar on the left with a list of "EXAMPLES" and a "SAVED" section. The main area contains a form for making an API request. The URL field is populated with "http://splwpk-dev.mampu.gov.my/api/get_my_score". The method is set to "POST" and the content type is "US". A "Send" button is visible. Below the form, there are tabs for "Authorization", "Content (1)", "Headers", and "Raw (6)". The "Content (1)" tab is active, showing a JSON payload: {"_token": "eyJpdilI6ImRTdTnx2Uwc21Ha1VvRT1qVW1JQkE9PSIsInZhbHVlIjo1UTBjZ0xMY0pPbVNFbTBaI".

On the right side of the interface, the response status is "Status: 200 (OK)" with a time of "940 ms" and a size of "0.33 kb". Below this, there are tabs for "Content (6)", "Headers (13)", "Raw (15)", "JSON", and "Timings". The "JSON" tab is active, displaying the response body: {"status": true, "final_score": 32.87, "verification_url": "http://splwpk-dev.mampu.gov.my/verify/eyJpdilI6ImRTdTnx2Uwc21Ha1VvRT1qVW1JQkE9PSIsInZhbHVlIjo1UTBjZ0xMY0pPbVNFbTBaI", "last_check": "04/09/2022 01:01:22".

At the bottom of the page, there is a section titled "What is API?" which explains that API (Application Programming Interface) is a computing interface that defines how software components interact with each other. It is a way of programmatically interacting with a separate software component or resource and expose functionality for internal or external use and testing. API defines what requests can be made, how they will be made and hides complexity from developers. API extends systems to partners, organizes code, and makes components reusable.
